IS THIS A BORROWED COPY?

Avoid the hassle and order your own personal two-volume set of IC MASTER. It's the surest way to simplify your IC selection efforts.

Only IC MASTER allows you to examine and compare the specifications, relative strengths, and weaknesses of all devices in serious contention for your application. And only IC MASTER brings you actual manufacturers' data sheets, allowing you to make complete and definitive device selections.

You can order IC MASTER simply by charging it to your VISA or MasterCard credit card. To place your order call Marie Botta at (516) 227-1314.

INTRODUCTION TO MICROPROCESSORS

This section begins with a Master Selection Guide that covers all major parameters needed to choose a microprocessor for a particular application. Microprocessors are sequenced by increasing data word size and then alphabetically by manufacturer.

Once you've chosen the proper microprocessor for your application, go to the System Components section. These are arranged alphanumerically by microprocessor, and shows all of the available peripheral devices that work with a particular microprocessor.

Finally, there is a General Purpose section describing devices that can be used in many different microprocessor systems, not just in certain families.

IS THIS A BORROWED COPY?

Avoid the hassle and order your own personal two-volume set of IC MASTER. It's the surest way to simplify your IC selection efforts.

Only IC MASTER allows you to examine and compare the specifications, relative strengths, and weaknesses of all devices in serious contention for your application. And only IC MASTER brings you actual manufacturers' data sheets, allowing you to make complete and definitive device selections.

You can order IC MASTER simply by charging it to your VISA or MasterCard credit card. To place your order call Marie Botta at (516) 227-1314.

INTRODUCTION TO INTERFACE

In the Interface Section the selection parameters differ for each category; therefore each has its own format. Some of the products in this section, primarily analog to digital and digital to analog converters, may be hybrids; the hybrids listed are only those packaged to be compatible with ICs.

In addition to these circuits are devices used to interface to peripherals such as: display drivers, keyboard encoder-decoders, line circuits, and transmitter-receiver circuits.

INTRODUCTION TO LINEAR

The Linear Section includes parameters on over 1100 operational amplifiers. Since there are so many devices, separate lists are provided for those having special characteristics such as High Speed, High Voltage or Wide Bandwidth. If you have located an op amp in a specialized category, you can review its characteristics by finding it in the Part Number or Product Indexes and looking it up in the Operational Amplifier Characteristics Section.

After the special lists, the "Operational Amplifier Characteristics" listings categorize amplifiers by input parameters. They are arranged in order of increasing offset voltage, bias current, offset current and then voltage drift. The column labeled "Comp" indicates the number of external components normally used for compensation; for example "0" means no compensation is required.

Consumer circuits such as audio amplifiers, AM, FM, and TV circuits as well as some digital devices (watches, calculators, etc.) are covered by model number in the Consumer Circuit Section. Linear devices that do not fit in conventional categories are listed under the heading "Other Linear Devices"

General Purpose

Function	Device	Source	Line
Dual Amplifiers. The 1458 (0°C to 70°C) and the 1558 (–55°C to 125°C) offer approximately the same performance as the 741. Compensation is built in.	XR1458	Exar

The 101A series consists of the 101A (–55°C to 125°C), the 201A (–25°C to 85°C) and the 301 (0°C to 70°C). These units require an external compensation capacitor which permits the bandwidth to be optimized for particular applications.	AD101A	◊† AD

The performance of the 741 series is similar to the 101. These units include internal compensation to make the device stable and to eliminate the need for an external capacitor.	AD741	† AD	20

FET Input. The "741" of the FET input devices has yet to be established. Such a device requires very low cost, several sources, and many users. Commercial devices in the 155 series above meet some of these criteria, however, devices from the series below are generally lower in cost.	**CA3140**	**† GE/RCA (2646)**	30

FET Input. Bipolar/JFET available in standard (155), wideband (156) and uncompensated (157) versions, premium performance (A and B suffixes), and various temperature ranges (155, 255, 355, etc are available.) Some versions approach the low cost of the units below.	**PM155**	**† PMI (2971)**

IS THIS A BORROWED COPY?

Avoid the hassle and order your own personal two-volume set of IC MASTER. It's the surest way to simplify your IC selection efforts.

Only IC MASTER allows you to examine and compare the specifications, relative strengths, and weaknesses of all devices in serious contention for your application. And only IC MASTER brings you actual manufacturers' data sheets, allowing you to make complete and definitive device selections.

You can order IC MASTER simply by charging it to your VISA or MasterCard credit card. To place your order call Marie Botta at (516) 227-1314.

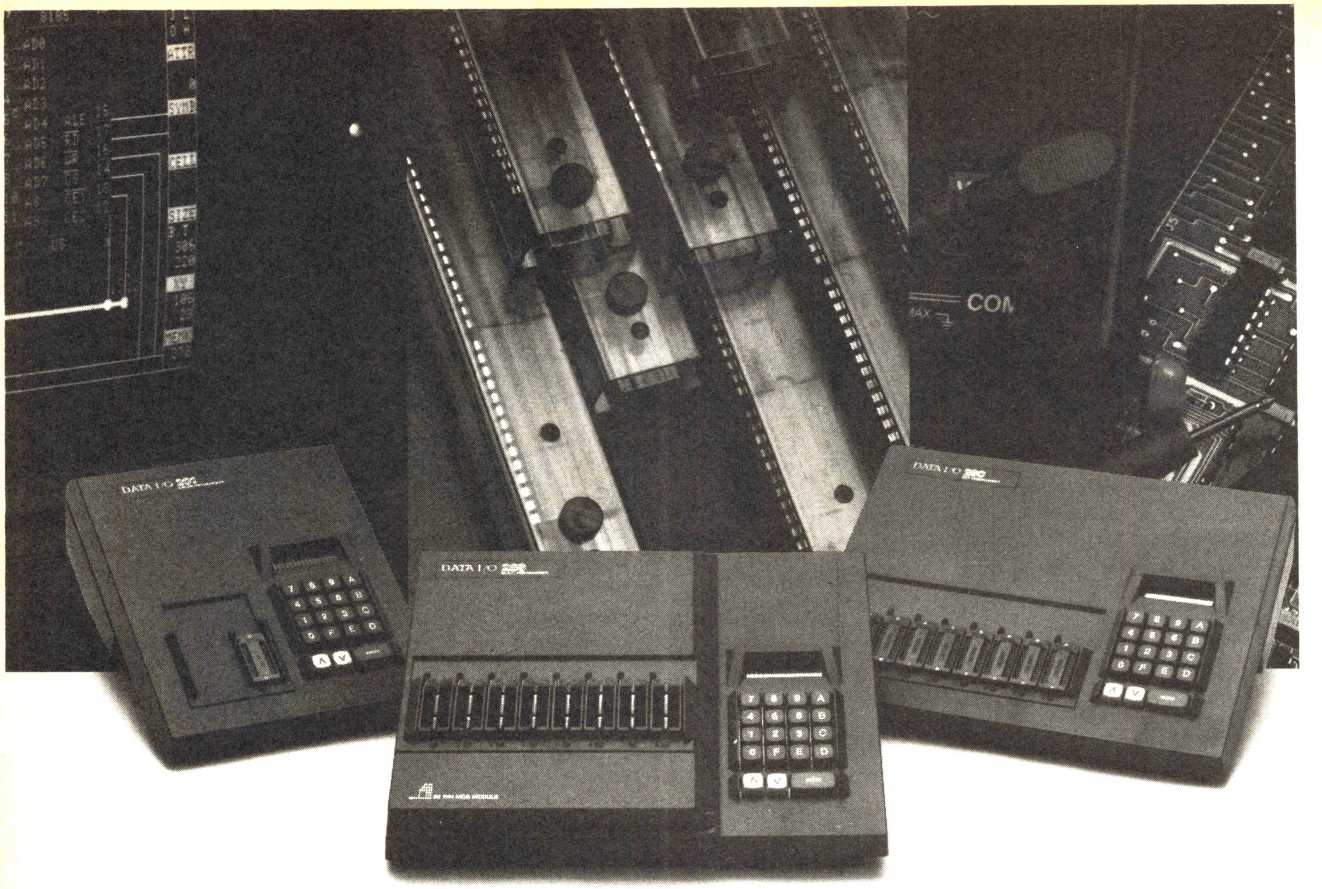
IS THIS A BORROWED COPY

Avoid the hassle and order your own personal two-volume set of IC MASTER. It's the surest way to simplify your IC selection efforts.

Only IC MASTER allows you to examine and compare the specifications, relative strengths, and weaknesses of all devices in serious contention for your application. And only IC MASTER brings you actual manufacturers' data sheets, allowing you to make complete and definitive device selections.

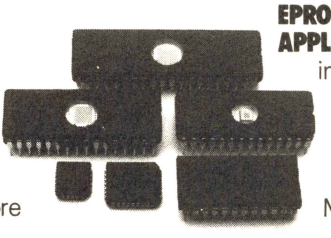
You can order IC MASTER simply by charging it to your VISA or MasterCard credit card. To place your order call Marie Botta at (516) 227-1314.



NOW YOU CAN AFFORD TO CHOOSE HIGH PERFORMANCE.

With the addition of the new 288 Multi Programmer, Data I/O®'s family of low-cost programmers achieves a level of performance and device support never before available in this price range. You can now afford to put our programmers anywhere you need them—in the engineering lab, on the production floor, or in field service. And each programmer supports manufacturer-specified algorithms, so you can expect Data I/O's high programming reliability.

THE 288: A FLEXIBLE ARCHITECTURE TO SUPPORT ALL YOUR DEVICE CHOICES. Choose the 288 with standard 512K bytes of RAM, to support more device types and packages than any other comparably priced gang or set programmer. Removable socket modules, device updates, and expandable RAM options (up to two megabytes), allow you to set or gang program 24- to 40-pin EPROMs, microcontrollers, and PLCCs. With all this flexibility in one programmer, your device choices won't be limited today, or in the future.



THE 280 AND 201: AFFORDABLE EPROM SUPPORT FOR ANY APPLICATION. From engineering and production to field service, the 280 Set Programmer and 201 EPROM Programmer support virtually any MOS and CMOS EPROM or EEPROM up to 512K bits. The 280 gives you the flexibility to program large data files into sets of devices in just one simple operation. And as a high-speed duplicator, it can program up to eight devices at once.

Choose the 201 when you want Data I/O reliability in a single-socket EPROM programmer. Whether you use it in your lab or take it on site for service calls, you won't have to compromise performance simply because the cost is out of reach.

FIND OUT JUST HOW LITTLE HIGH PERFORMANCE COSTS. Call us today for more information about our family of low-cost programmers.

INTRODUCTION TO MEMORY

The Memory Section provides initial selection information and data on E²PROMs, RAMs, and ROMs as well as other memory devices. In these particular sections, the devices are characterized by organization (words and bits/word) and by access times. In order to assure that the access times are comparable, whenever possible the times are shown in nanoseconds over the full rated temperature range for the devices (i.e., 0° to 70°C for commercial units and −55°C to 125°C for military units). The full temperature nanosecond value is marked "nsF". When this value isn't specified, the guaranteed nanosecond value at room temperature is listed followed by "nsR". "Typical" values are invariably much faster than the guaranteed ones so that such listings place these memories higher on the list than they otherwise would appear.

ALTERNATE SOURCE DIRECTORY

The Alternate Source Directory is an industry-wide cross reference of devices that manufacturers claim are pin-for-pin and functional equivalents to IC's made by other firms. It contains over 113,000 cross references.

The second column of this Alternate Source Directory shows devices that are replacements for those in the first column. Devices listed in **BOLD FACE** type have technical data in the Master Selection Guides. This information begins on the page listed to the right of the **BOLD FACE** part numbers. Products preceded by a ♦ have been discontinued by the manufacturer. This section does include discontinued devices that are not listed in the Master Selection Guides; in order to maintain this list within some reasonable bounds, the A and B suffixes indicating improved versions generally have been dropped.

One of the difficulties with any cross reference is that devices meant to be alternates do not necessarily perform the same in all circuits. Thus, it will be necessary for you to check specifications, or even check circuit performance before deciding which alternates are right for you. But if you do not find the devices you need here, it may be possible to find additional alternates by locating the device in the Master Selection Guides. Particularly for digital circuits, the other products grouped with it will normally offer similar or identical performance.

♦ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

♦ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.

♦ Discontinued

The manufacturers report their devices can be used as direct replacements.
Performance details often differ, so compare the specifications considering your requirements.
